Copper-Mining in Norway.

A foreign consul has issued a report in which he says that the principal little copper to be used as copper ores, were formerly valueless and were not are exported in a raw condition. The largest quantities of pyrites are to be found near Trondbjem and Bergen. The Roros Works, which are Norwsgian property, have been worked since 1644. With an annual production of nearly 300 tens of pure copper, they were for a number of years the most important copper-works in the country, and are at present the largest mining establishment in the country but two. Two hundred and seventy men are employed there, and during the last year considerable mining of pyrites has been carried on also for exportation. The Miraker works, in the Province of North Troudliem. produced for a number of years about seventy tons of pure copper annually. The Ytterelte mines, also situated in the Trondhiem province, were originally worked for copper, but have later been worked on a large scale for English account for gaining pyrites for sulphur. Several mines were worked in the neighborhood of Trondbjem, especially in the Meldal, and near Bergen, the Valaheim mines, besides others, were operated on a large scale for gaining copper and sulphur. The works on the Karmo Island, in the Province of Stravanger, owned by Belgians and Frenchmen, were first oper-

The pyrites, which contain too las with saying that the President had no intention of making an extended Western tour this year, then to much mined. But from about 1860, when West is a highly brisk, spacious and a great demand for them wrose as a interesting section of the country. material in the factories of sulphusic While thousands of persons in the acid, they have been worked on a States of the Mississippi valley and the Pacific coast would be highly gratiRed to see Mr. Cleveland, yet updoubtedly he would have more to gain than they by the meeting. There has for about two years post been a strong impression on the minds of many of Mr. Cieveland's fellow-citizens that that gentleman has peculi it ideas regarding the extent of the nation over whose destance he presides: Indeed, rightly or wrongly, they believe that he imagines that the boundaries of the nation may be presented by a line drawn castward from bake Erie to Long Island Sound, northward to the St. Lawrence and southwestward to Lake Erie again. They have no objection to the President's pagtiality toward New York. They from: ly concede that that imperial commonwealth contains one-tenth the population, one-math the wealth and twothirds of the rescality of the entire country. But they are not willing to acknowledge that it is the whole country. There is territory over which the stars and stripes floats binsides that washed by the waters of the St. Lawrence and the Hudson.

The Philosophy of Succ-Bincking

The Waverly Magazine discourses as follows upon the philosophy of the ated in 1865, and are now the largest | very promie subject of blacking shoes: mining establishments in the country, "Did it weer occur to you," said a occupying about 600 workmen. The chemist, "what a remarkable and shafts have been sunk nearly 500 me- unique process the blacking of a boot ters. The pyrites richest in copper is?
